

FIELD INVESTIGATIONS & HANDS-ON SCIENCE

designed for
High School and Middle School

*Do your Students know where their water comes from?
Want them to learn more about water quality and conservation?*

This is the perfect field study for your students!

The John Bunker Sands Wetland Center is located in the middle of a 2000 acre manmade wetland near Seagoville. The filtered water from our wetland provides water to your school and communities. What better way to teach students these concepts than to show them a source of their water! We offer hands-on field investigations for students that focus on wetland ecology, water quality and wildlife at the wetland.

Students will be able to:

- Collect information by observing and measuring water quality
- Use appropriate tools to collect, record and analyze information on water quality and macroinvertebrates
- Conduct laboratory and field investigations on water quality and bird populations
- Predict the effects of changes in ecosystems caused by living organisms

Programs Offered:

Wetland Ecology & the Macros
Birds: The Nesting Generation
Plants: The Workhorse of the Wetland

Scheduling Information:

- Classes for Middle & High School Students
- Programs last 1.5 hours
- Limit 60 students
- \$5.00/per student
